Satellite System Engineering

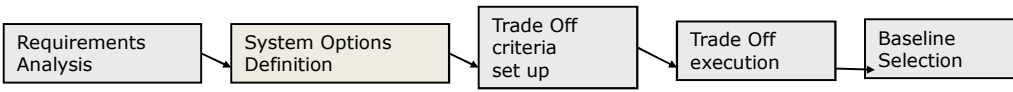

-- Options & Trade-offs

Prof Dr Shufan Wu
 Chinese Academy of Science (CAS)
 Shanghai Engineering Centre for Microsatellite
 Haik Road 99, Shanghai, China
 Email: shufan.wu@mail.sim.ac.cn

2016.10.24, Thailand 1

Mission/System Options

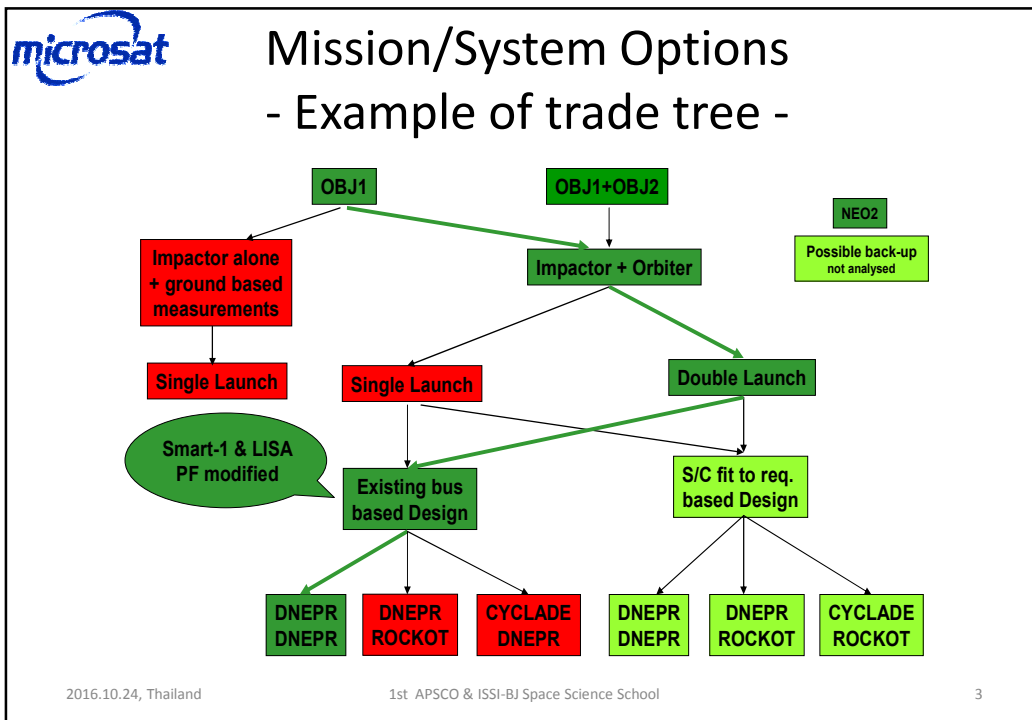

```

graph LR
  A[Requirements Analysis] --> B[System Options Definition]
  B --> C[Trade Off criteria set up]
  C --> D[Trade Off execution]
  D --> E[Baseline Selection]
  
```

- Mission/System options are direct consequences of the Requirement Analysis (different perceived ways to comply with the requirements)
- Exhaustive search of all possible system options has to be done in the early stages of a project
 → In order to schematize, the options shall be organized on trade tree or a matrix (systematic)
- Option selection is performed via trade offs (supported by the previous trade tree)

2016.10.24, Thailand 1st APSCO & ISSI-BJ Space Science School 2

microsat Mission/System Options
- Example of trade tree - 2

Orbit	Launcher	Launch strategy	Service Module Design
L2 halo	Soyuz 2.1b	Direct to orbit	Own design
			Re-use of Gaia SM
		Through Moon swing-by	Own design
	Re-use of Gaia SM		
	Ariane 5 ECA	Shared GTO launch	Own design
			Re-use of Gaia SM
Own design			
L2 Lissajous	Soyuz 2.1b	Direct to orbit	Own design
			Re-use of Gaia SM
		Through Moon swing-by	Own design
	Re-use of Gaia SM		
	Ariane 5 ECA	Shared GTO launch	Own design
			Re-use of Gaia SM
Own design			
HEO 3-day period	Soyuz 2.1b	Direct to orbit	Own design
			Re-use of XMM SM
Earth trailing	Soyuz 2.1b	Direct to orbit	Own design
			Re-use of Gaia SM

Mission/System Trade offs

```

    graph LR
      A[Requirements Analysis] --> B[System Options Definition]
      B --> C[Trade Off criteria set up]
      C --> D[Trade Off execution]
      D --> E[Baseline Selection]
  
```

- Trade off shall be established for option selection in a clear way:
 - Trade off criteria
 - Relative weighting
- Trades shall be based as much as possible on quantitative criteria (but in early phases qualitative/parametric trades are common)
- Trade offs shall be well documented and recorded, as they may be re-opened in later phases
- Option selection will end with the definition of baseline and back up option(s)

2016.10.24, Thailand 1st APSCO & ISSI-BJ Space Science School 5

System Trade offs

- Example of table -

Parameters	Weighting factors	Option 1		Option 2		Option 3	
		Ranking [1 - 5]	Score	Ranking [1 - 5]	Score	Ranking [1 - 5]	Score
Total Mass	0.3	4	1.2	5	1.5	2	0.6
Payload Mass	0.3	2	0.6	4	1.2	2	0.6
Cost	0.2	3	0.6	1	0.2	5	1
Risk	0.1	2	0.2	2	0.2	4	0.4
Complexity	0.1	3	0.3	4	0.4	4	0.4
	1		2.9		3.5		3

Notes:

- Weighting factor: from 0 (less important) to 1 (more important)
(Overall sum should be equal to 1)
- Ranking: From 5 (better) to 1 (worst). Scale is arbitrary.

2016.10.24, Thailand 1st APSCO & ISSI-BJ Space Science School 6

On Trade-offs

Trade-off tables are useful to clarify all the contrasting factors contributing to a decision but they should always be taken with a pinch of salt:

- Intrinsic subjectivity in the definition of the weighting factors
- Possible misleading conclusions when scores are very close

It is advisable to check the sensitivity of the results to weighting factors change

Often the result is the screening out of bad options rather than the selection of the best one
